Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PROTEINS THAT ASSOCIATE WITH THE ROLF DIMER INCLUDE THREE FAMILIES OF REGULATORY SUBUNITS B (THE R2/R2/PR55/B55, TA/R4 / PR72/PR130/PR59 AND R5/R8/B56 FAMILIES). THE 48 kDa VARTABLE REGULATORY SUBUNITS AND CELL SIGNALING MOLECULES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-OCT-1996 (Rel. 34, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hatano Y., Shima H., Haneji T., Miura A.B., Sugimura T., Nagao M.;
"Expression of PP2A B regulatory subunit beta isotype in rat testis.";
FEBS Lett. 324:71-75(1993).
-!- FUNCTION: THE B REGULATORY SUBUNIT MIGHT MODULATE SUBSTRATE
SELECTIVITY AND CAPALYTIC ACTIVITY, AND ALSO MICHT DIRECT THE
LOCALIZATION OF THE CATALYTIC ENZYME TO A PARTICULAR SUBCELLUIAR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SUBUNIT: PP2A CONSISTS OF A COMMON HETERODIMERIC CORE ENZYME, COMPOSED OF A 36 KDa CATALYTIC SUBUNIT () AND A 65 KDa COMPOSED OF A 36 KDa CONSTANT REGULATORY SUBUNIT () FR65 OF SUBUNIT A), THAT ASSOCIATES WITH A VARIETY OF REGULATORY SUBUNITS. PROTEINS THAT ASSOCIATE WITH THE CORE DIMER INCLUDE THREE FAMILIES OF REGULATORY SUBUNITS B (THE R2/R9/PR55/SB5), R3/B', /PR72/PR330/PR59 AND R5/R'/R56 FAMILIES), THE 48 KDa VARIABLE REGULATORY SUBUNIT, VIRAL PROTEINS, AND CELL STONALLING MOLECULES.

TISSUE SPECIFICITY: BRAIN AND FESTIS.

SIMILARITY: BELONGS TO THE PHOSPHATASE 2A REGULATORY SUBUNIT B
                                                                                             01-NOV-1997 (Rel. 35, Last sequence update)
30-MAY-2000 (Rel. 39, Last annotation update)
Serine-threonine protein phosphatase 2A, 55 KDa regulatory subunit B,
beta isoform (PP2A, subunit B, B-beta isoform) (PP2A, subunit B, B55-
beta isoform) (PP2A, subunit B, PR35-beta isoform) (PP2A, subunit B,
R2-beta isoform) (PP2A, subunit B, BRB isoform)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description

   ANY40001-92 are derived from human secreted proteins. The polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Pathological conditions can also be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the polynucleotide. Specific uses include developing products for the diagnosis or treatment of cancer, tumors, neurodegenerative disorders, developmental abnormalities and fetal deficiencies, blood disorders, sepsis, diseases of the immune system, autoimmune diseases, inflammation, allergies, Alzheimer's and cognitive disorders schizophrania, obesity, osteoporosis, arthritis, infections, ALDS, connective tissue disorders, transplant rejection, and reproductive disorders. The polypeptides or polynucleotides can also be used as food additives or preservatives, such as to increase to decrease storage capabilities, fat content lipid, protein, carbohydrate, vitamins, minerals, cofactors or other nutritional

                                                      proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.
                                       The present invention provides the protein and coding sequences of novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Amino acid sequences (AAR94977-79) of UMR-106 clones ROB1, ROB2 and ROB3 (see also AAT44381 and AAT18886-87) were deduced for the region including transmembrane domains 3 and 4. ROB1, ROB2 and ROB3 correspond to isoforms Cach1, Cach2 and CacH3, respectively, of domain 4 of the alpha 1 subunit of a strecth-activated cation (SA-Cat) channel. Comparison of the sequences with corresponding sequences of rat.

ROB1, ROB2 and ROB3 correspond to isoforms CaCh1, CaCh2 and CaCh3, respectively, of domain 4 of the alpha 1 subunit of a stretch-activated cation (SACat) channel. Comparison of the sequences with corresponding sequences of rat brain L-type calcium channels show that CaCh from rat osteosarcoma UMR-106 cells lack a portion of the IVS3-IV4 linker domain as a result of alternative splicing. ROB2 is a close isoform of the
                                                                                           Gaps
         brain L-type calcium channels show that CaCh from rat osteosarcoma UMR-106 calls lack a portion of the IVS3-IV4 linker domain as a result of alternative splicing.

The comparison revealed the use of an alternative splice acceptor site or an exon skipping event in the IVS3-IVS4 linker, producing shorter transcripts in ROB1-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                     Stretch-activated cation channel; SA-Cat; calcium channel; CaCh; bone; osteoblast; antisense; osteosclerosis; hypertension.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Stretch activated cation channel gene antisense oligonucleotide used in the treatment of hypertension and osteosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The comparison revealed the use of an alternative splice acceptor site or an exon skipping event in the IVS3-IVS4 linker, producing shorter transcripts in ROB1-3.

The invention relates to isolated polynucleotide (I) and probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, and prerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The cand gene mapping, and in combinant production of (II). The castore normal activity of (II) to to treat disease states involving (II) is useful in gene therapy techniques (II) is useful in gene therapy techniques (II) (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and (II) and (II) are useful in medical in maging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in the casponsible for genetic disorders or other traits to assess biodiversity and cannot act of sequences. ABG00010 ABG00017 represent novel human cand amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; Immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis,

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1)
amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic
activity, and can be used in gene therapy and vacche production. (1)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (1) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (1) by expressing inactive proteins or to
supplement the patients own production of (1). Additionally, (1).
polynucleotides may be used to produce the secreted (1), by inserting
the nucleic acids into a host cell and culturing the cell to express the
crotein. (1) proteins and polynucleotides may be used to provent,
diagnose and treat immune/haematopoietic-ferived cells. AAK64703
concers and cancer metastases of haematopoietic antigen genomic
sequences from the present invantion. AAK54942 to AAK82169
represent sequences used in the exemplification of the present invention.
                                                                                     human immune/hematopoietic antigen polypeptides, diagnosing and/or treating cancers and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Telomerase-associated proteins useful to identify telomerase inhibitors - useful e.g. for cancer treatment in mammals, and screening methods to isolate additional telomerase-associated genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EST3 gene; telomerase inhibitor; cancer; mammal; tumour growth;

                                                                              flanking regions and the 'i ribosomal frame shift, used in the method of the invention to identify telomerase inhibitors which are useful in the treatment of cancer. The proteins are useful to isolate telomerase inhibiting compounds. Such inhibitors are useful in cancer treatment in mammals, since reactivation of telomerase (normally present only in germ line cells) is thought to be necessary for sustained tumour growth, and only tumour and stem cells would be targeted by such agents, producing limited side effects compared to chemotherapeutic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAY40001-92 are derived from human secreted proteins. The polynucleotides and their corresponding secreted polypeptides are useful

protein or gene therapy. Pathological conditions, e.g. by protein or gene therapy. Pathological conditions can also be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the polymucleotide. Specific uses include developing products for the diagnosis or treatment of cancer, tumors, neurodegenerative diasorders, developmental abnormalities cancer, tumors, neurodegenerative diasorders, sepsis, diseases of the immune system, autoimmune diseases, inflammation, allergies, Alzheimer's and cognitive disorders, schizophrenia, obesity, osteoporosis, arthritis, infections, AIDS, connective tissue disorders, transplant rejection, diabetes, asthma, sepsis, anew, psoriasis, cardiovascular disorders, and areproductive disorders. The polypeptides or polynucleotides can also be used as food additives or preservatives, such as to increase or decrease storage capabilities, fat content, lipid, protein, connected to the properties or other nutritional

pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acre vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and thections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

C. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; CCAAT/enhancer binding protein; C/EBPbeta; transcription factor; intellerukin; IL; p20; inflammation; adult respiratory distress syndrome; allergic rhinitis; arthritis; bronchitis; bronchitis; bronchitis; bronchitis; ortanique allergic allergic fibrosis; extensive allergic alveolitis; anti-inflammatory; cidiopathic pulmonary fibrosis; interstitial lung disease; anti-allergic; inflammatory bowel disease; respiratory viral infection; anti-arthritic; anti-asthma; intestinal; antiviral.

                                                                   factor
                                                  The present sequence is a human CCAAT/Enhancer Binding Protein (C/EBP) beta-3 (referred as p20) isoform. The C/EBPbeta is a transcription factor which is identified as being critical for maximal interloukin (L1)-6 and IL-8 expression. The isoforms of C/EBPbeta are C/EBPbeta-1, C/EBPbeta-2 and C/EBPbeta-3. The p20 isoform of C/EBPbeta is useful for treating inflammation, adult respiratory distress syndrome, allergic rhinitis, arthritis, bronchitis, bronchopulmonary dysplasia, cystic fibrosis, extensive allergic alveolitis, idiopathic pulmonary fibrosis, inflammatory bowel disease, interstitial lung disease and respiratory
Treating inflammation, particularly of the lung, by increasing activity of p20, the beta3-isoform of CCAAT/enhancer binding protein

and ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to reqenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, liptd, protein, cambohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents a novel secreted protein of the invention.
